

## UVC LLC, Brad Hollander

A local inventor, Brad Hollander, has worked with germicidal disinfecting products since the 70s. Perhaps he had an inside track on what future needs would be during this year's Pandemic. He is responsible for bringing a variety of products to market to disinfect surfaces without chemicals. His company, UVC LLC, is being honored for its generous side, that being the development, use, maintenance and support and use of an "Ozone Generator" at the Sheriff's Office. In a June 30th letter, Sheriff Coverley thanked Mr. Hollander saying the technology will greatly enhance the department's ability of disinfect vehicles and the jail. Keeping staff healthy and limiting exposure to bio hazards is a constant battle for the Sheriff's Office. With this assistance they are able to sanitize high volume work areas keeping deputies, the public, and inmates as safe and healthy as possible.

Congratulations to Brad Hollander and UVC LLC!
